

Cameron Carlyle

Senior Software Engineer

Software engineer with 13 years of experience building complex web and mobile applications across a variety of domains. Architected systems and led development from business-process discovery through production delivery, while actively contributing code.

EXPERIENCE

Objective, LLC

Senior Developer

2021 - present

- Architected and led client projects, translating business processes into technical specifications and phased delivery plans. Selected technologies and infrastructure to meet client needs and delivery constraints.
- Planned and implemented phased legacy rewrites that supported continued development in both systems. Used parallel infrastructure, characterization tests, and shared data to enable DNS-based rollback without downtime or data loss.
- Built web and mobile applications with React and React Native and backends in TypeScript, Elixir, and Ruby across finance, healthcare, insurance, logistics, and ecommerce.
- Built durable webhook processing with PostgreSQL event storage, deduplication, transactional worker claims, and recovery workflows. Used transactions, advisory locks, and completion checks to protect business operations from duplicate processing.
- Designed AWS infrastructure with CloudFormation, networking, RDS, ECS Fargate, load balancing, and autoscaling, including GovCloud environments. Automated container delivery with deployment verification, structured logging, and operational monitoring.
- Implemented SSO, MFA, and authorization, and migrated authentication while preserving existing credentials. Preserved audit history across application stacks and hardened API access, XML ingestion, and database TLS connections.
- Diagnosed production failures and resource constraints. Replaced bulk record loading with cursor processing, moved long-running work into background jobs, and reduced repeated queries and export concurrency.
- Integrated LLM-assisted development into project workflows, creating repository-specific guidance for implementation, testing, and code review.
- Conducted an in-depth evaluation of Go for agency projects; retained TypeScript because the team's existing expertise and available libraries and integrations better supported delivery needs.

Developer

2017 - 2020

- Built Elixir/Phoenix ordering applications and SAP integrations, modeling sales, purchasing, fulfillment, and accounting workflows with explicit state transitions, validation, and background jobs.
- Developed Phoenix LiveView financial interfaces with reusable tables, bulk transaction editing, valuation workflows, and statement review and approval.
- Extended retirement-planning algorithms, corrected financial calculations, and built advisor-facing PDF reports and automated tests.

TECHNICAL SKILLS

Languages

TypeScript / JavaScript
Elixir, Go, Ruby, SQL
Python

Backend & data

Phoenix, Rails
Node.js, Hono, Express
REST, GraphQL
PostgreSQL, MySQL
MongoDB, SQLite

Infrastructure

AWS, CloudFormation
Linux, Docker
ECS Fargate, EC2
RDS, S3
GitHub Actions, CI/CD

Security & testing

SSO, OAuth/OIDC, MFA
Authorization, TLS
Unit and integration tests

Frontend & mobile

React, React Native
Next.js, Remix, TanStack
Phoenix LiveView

EDUCATION

Appalachian State University

MA, Geography

May 2013

University of North Carolina Asheville

BS, Environmental Science

May 2010

Cameron Carlyle

Senior Software Engineer

EXPERIENCE, CONTINUED

Pebble | Senior Engineer

Jan 2020 - Jun 2020

- Developed an interactive climbing-wall map and activity leaderboard for an indoor climbing route guide and management application using React, React Native, Express, and MongoDB; optimized backend query performance.

Career break

Jun 2020 - Apr 2021

Traveled around the country climbing.

Grow.com | Software Engineer

Jun 2017 - Sep 2017

- Built features with React, MobX, Express, and PostgreSQL, resolved application defects, and developed and deployed a companion Chrome extension.

City of Asheville | Software Developer (Civic/GIS Programmer)

Jul 2014 - Mar 2017

- Built public and internal data applications with AngularJS, Node.js, PostgreSQL, PostGIS, and ArcGIS APIs, using iterative usability testing to improve access for residents and city employees.
- Developed a replacement for a mission-critical web service with Node.js and Express, and established the foundation for a React, Redux, and GraphQL migration.

Locus Technologies | Software Engineer

Apr 2013 - Jul 2014

- Rewrote a Flex and ColdFusion application with AngularJS and a J2EE REST API, and built a custom GIS API and environmental web map using the Google Maps JavaScript API.

Appalachian State University | Graduate Research and Teaching

Aug 2011 - Apr 2013

- Managed a water-quality monitoring program and database, and taught labs in GIS, Python, VBA, and environmental science.

Various roles while attending college

Jan 2007 - Aug 2011

Climbing gym, clerk, and gutter-cleaning work.

KBR | Logistics Coordinator

Oct 2005 - Nov 2006

Al Asad, Iraq

U.S. Army | Transportation Management Coordinator

Sep 2001 - Sep 2005

Italy, Kosovo, Turkey, Iraq
